Profile

I am a web developer with four six of experience. Work with PHP development environment. From native, to frameworks like Codeigniter and Laravel. I have helped small agencies to transform from traditional administration to integrated database-based administration, and have duplicated it across multiple agencies. I've also worked for an IT company to develop and maintain their cloud services.

I am interested in learning the basics about software development for good software quality and maintainability. Currently studying backend technologies such as goLang, microservice, docker, CICD with a clean architecture concept.

Employment History

Web Developer, PT. Interaktif Internasional

Jan, 2018 - Present

Develop software for internal and for cloud services. Among them are the backend for the POS system, and the attendance data management system. It has been used by several public and private companies. My job is to create features that have been defined by the company. As much as possible I create a lightweight system for user convenience, optimize database requirements, and reusable code.

Freelance Web Programmer, Multi Kreasindo

Nov, 2014 - Dec, 2017

Creating administrative software for several health institutions such as hospitals and clinical laboratories. my job is to explore user requirements, create simple technical diagrams, implement them into code, and maintain them. Here, I make as much software as possible to suit my clients in the field.

Project Experiences

InAct Attendance Device Management System

This application is used to manage attendance data from various machines spread across various regions.

Used by **PT. Aneka Indomakmur**, **PT. Pertani Persero**, **CV. Beauty Kasatama**.and others.

My role was research on attendance machine communication technique, implementation of the scheme provided by the system analyst.
